### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Henry Feiereisen on 09/10/2009.

The application has been amended as follows:

9. An apparatus for locating an instrument, comprising:

an instrument having a body;

at least one magnet disposed inside ~~a~~ the body of the instrument, the at least one magnet being rotatable independently of a rotation of the body of the instrument and adapted to produce a moving magnetic field extending outside the body of the instrument to generate a magnetic moment which is perpendicular to an axis of the instrument;

a drive for rotating the at least one magnet independent of the body of the instrument;

variation means for varying the magnetic field generated outside the body of the instrument by the at least one magnet ~~outside the body of the instrument~~, thereby creating a variable magnetic field component which relates to a roll angle of the instrument; and

a receiver outside the body of the instrument configured for measuring the variable magnetic field component ~~representative of~~ to determine the roll angle of the instrument.

26. A method of determining a location of an instrument, comprising the steps of:

rotating at least one magnet disposed inside a body of the instrument independent of a rotation of the instrument to produce a magnetic field to generate a magnetic moment outside the body of the instrument perpendicular to an axis of the instrument;

detecting three time-dependent magnetic field components of the magnetic field; ~~and~~

modulating a frequency of the rotation for variation of the magnetic field generated by the magnet to minimize the influence of a disturbing external magnetic field or to distinguish the magnetic field from another magnetic field; and  
determining a location of the instrument based on the detected magnetic field components.

31. A method of determining a location of an instrument, comprising the steps of:

producing a magnetic field by a rotating magnet inside a body of the instrument independent of a rotation of the body of the instrument to generate a magnetic moment perpendicular to an axis of the instrument, with the magnet configured as a transmitter;

detecting with a receiver three time-dependent magnetic field components produced by the rotating magnet outside the body of the instrument; ~~and~~

modulating a frequency of the rotation for variation of the magnetic field generated by the magnet to minimize the influence of a disturbing external magnetic field or to distinguish the magnetic field from another magnetic field; and determining a location of the instrument based on the detected magnetic field components.
